

Epoxy Natural Stone/Chattahoochee Stone

Also called River Rock, Pebble Stone, Pebble Rock

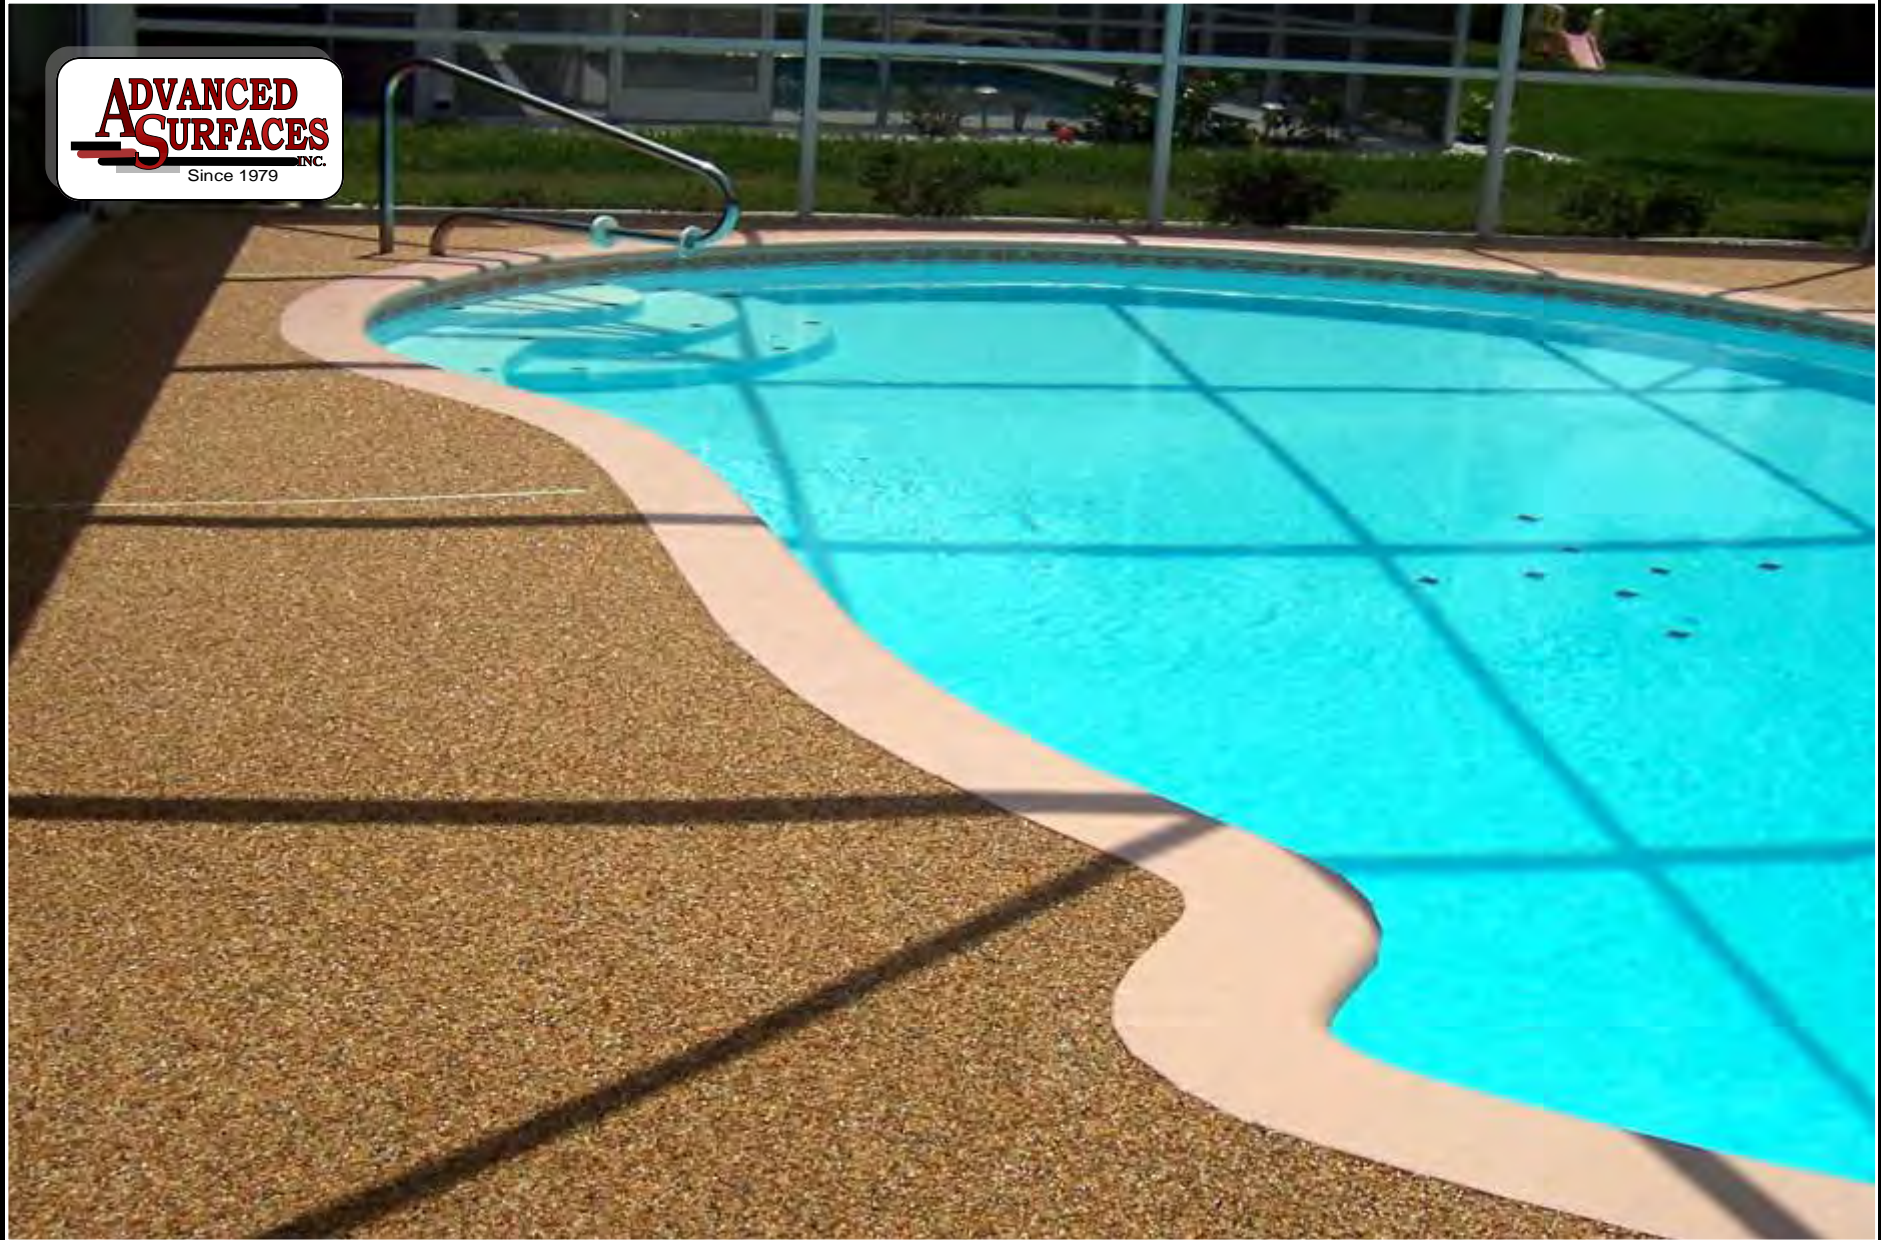

Epoxy Natural Stone is a decorative surface that is a unique blend of river rocks that are washed and dried. The stones are bonded together with 2 components of epoxy binding agents. No dyes or fillers are added.

Epoxy Natural Stone greatly reduces puddles and standing water. The porous nature allows water to drain down through the surface where it will move to a drain or landscaped areas and evaporate.
